***Allowable Subject Matter***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kawase et al teach (Figures 5,9-11) testing a sensor by applying a positive and negative directional voltage signal to a sensor 30.

The following is a statement of reasons for the indication of allowable subject matter: The prior art neither teaches nor suggests the combination "based on a *difference* between the impedance" (italics added, line 4 from last of claims 1 and 15; italics added, lines 3-4 from bottom of claim 8), "when the *positive* voltage is applied" (italics added, line 3 from last; italics added, last two lines of claim 8; lines 3-4 from bottom of claim 15), "and when the *negative* voltage is applied" (italics added, last line of claim 1; line 3 from bottom of claim 8; line 2 from bottom of claim 15) with remaining claim limitations of claims 1,8. None of the cited references make two determinations of impedance when applying a positive and negative voltage for subsequent comparison of the two determined values to detect abnormality of an oxygen sensor.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert R. Raevis whose telephone number is 571-272-2204.
